## Love Being Woman: BeBe

at 2:05 PM

Love Being Woman has a fabulous site. I was immediately attracted to it because it just screams woman friendly, to me at least. Now most people don't have a dresser (and a few boxes) full of sex toys and I try to consider the first time buyer (possibly someone like a friend, a mother, my grandmother even) coming to a site that screams SEX TOYS and being terrified. Love Being Woman, once again, seems very friendly. Warm & welcoming. One of the things they set out to do was a create a vibrator designed by women that was beautiful AND functional. And they'd had enough with the tacky images and bad packaging. As someone who dissects every package with a little too much critique, I have to say I definitely appreciate their attention to detail.

The BeBe comes in a simple white cardboard box with a sticker of the company's logo on top. Open the white box and you're greeted with a black satin bag with a printing of the company's logo. Inside the satin drawstring bag there is an egg like purple metal container that houses the BeBe. The container snaps together well and makes great storage. It also is surprisingly subtle with a nice pattern. With all the other gadgets I have being in the bathroom & bedroom, someone could easily see this in a drawer and not really give it a second guess. Finally when you open the container you're greeted with the bright purple BeBe. Another nice note, inside the container is a black lining that holds two batteries (included). This is especially nice for those who travel and always forget batteries. They're already there and you don't risk ruining your vibrator by leaving them in. The vibrator takes two AA batteries. Rechargeables do work well in this vibrator, so while the vibrator itself is not rechargeable, at least you can still be environmentally friendly.

Easy to use, classy, with an extremely well thought out case, the BeBe is non intimidating. With a website that is very woman friendly, it's easy to see why woman love this vibrator.
